LAURENT Perfumes

LAURENT is an independent perfume house that creates unique fragrances designed to captivate the senses and reflect each individual's personality in a refined and distinctive way. The company blends art and science in the craft of perfumery to develop original compositions that combine luxury, elegance, and exclusivity at competitive prices, making an unforgettable fragrance experience accessible to all.

Each fragrance by LAURENT tells its own story, creates lasting memories, and reflects the identity of its wearer transforming perfume from a simple scent into a personal expression of style and sophistication.

Business Problem: perfume companies face challenges in reaching a wider audience online, as many of them rely primarily on in-store sales.

Customers also struggle to discover unique fragrances, learn about their ingredients and prices, and compare different options without physically visiting the store.

Many small businesses lack a strong digital platform to present their products in an attractive and engaging way, resulting in a limited and impersonal online shopping experience. Customers also lack tools that help them choose perfumes that match their personality or preferences, which may reduce customer satisfaction and repeat purchases.

Proposed Solution: This project aims to design a web application for LAURENT that provides customers with a complete and integrated online perfume shopping experience.

- Through the platform, customers will be able to:
- Explore the company's exclusively designed perfumes through an attractive and elegant interface.
- View detailed information about each fragrance, including ingredients, fragrance notes, and prices.

- Browse perfumes by category (Men, Women, Unisex) or based on preferences.
- Add products to a shopping cart and complete the purchase process easily and securely.
- Discover the story behind each fragrance and the brand identity, making the shopping experience more personal and distinctive.

In this way, the website will not only function as an online store, but also as a comprehensive digital platform that reflects the luxurious identity of LAURENT and delivers a unique and memorable fragrance experience.

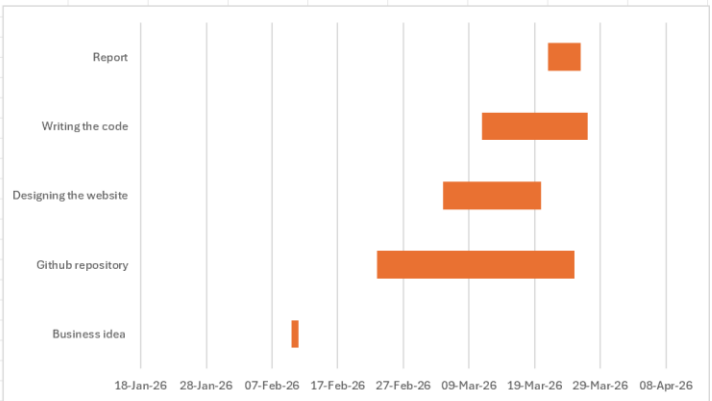
Designing the w	05-Mar-26	26-Mar-26	15
Writing the code	11-Mar-26	27-Mar-26	16
Report	21-Mar-26	26-Mar-26	5



Tasks:

Batool Almarzuqi: I created the homepage for our Laurent perfume store web, inspired by a soft and elegant aesthetic that reflects luxury and femininity. I use in the design calm colors and a clean layout to create a visually appealing experience.

The homepage includes a main banner that includes ADs, also best-selling products section that highlight popular products, and categorized sections like women's and men's and both, allowing users to easily explore the store. This design helps users quickly find what they are looking for while enjoying a smooth and attractive browsing experience, I also write the README section in Github.

Arwa Al-harbi: I began with the "About Us" page, which is dedicated to information regarding the store, its background, purpose, and how one can contact it. Like any other store promoting its products, we developed a "Products" page with colors that match our theme, which is based on light purple and the color of the Laurentia flower. The store offers three categories: women's, men's, and both, with prices that suit the average budget for any luxury perfume. We also added an "Add to Cart" button as an alert to make it easy for the customer to know when their order has been added to their shopping cart.

Solaf Ali: I was responsible for developing the Shopping Cart page for the Laurent perfume store website. The goal of this page is to provide users with a clear and organized view of the products they have selected before proceeding to purchase.

The shopping cart was designed using a clean and simple layout that matches the overall theme of the website, using soft purple tones and a structured table format. The page displays important details such as product images, names, prices, quantities, and a delete option.

Additionally, a total price section was included to summarize the cost of all selected items, along with a “Proceed to Checkout” button that allows users to continue the purchasing process easily.

The design focuses on usability and clarity, ensuring that users can review their selections, make changes if needed, and complete their shopping experience smoothly.

Batool Almohsen: I designed the checkout page of the Laurent perfume store website. This page was designed to provide a simple and user-friendly experience for customers to complete their purchases and without confusion.

The checkout page includes a Shipping Information section, where users can enter their personal details such as full name, phone number, email address, and location. This helps ensure accurate delivery and smooth order processing.

In addition, I created a Payment Information section that allows users to choose their preferred payment method. The layout was designed to be clear and organized so that users can easily follow each step.

The page also contains an Order Summary section, which displays the selected product, price, quantity, and discount (if a promo code is applied). This section helps users review their order before confirming it.

I focused on using a clean layout, soft colors, and proper spacing to match the overall theme of the website and provide a smooth and visually appealing user experience.
